Professional Profile

A success-driven Computer Science student seeking to embark on a career specializing in software engineering, coding, and programming areas. Works well in a team and excels within fast-paced and challenging working environments. Always eager to learn and accomplish assigned tasks. Hold basic background knowledge of Internet Computing (TCP, DNS...), Artificial Intelligence, Computer Graphics, Relational Database through studying at UBC.

Technical Skills

- Familiar: Java (2 Years), Typescript (1 year), C++ (1 year)
- Basic: Python (Self-Learning in progress), MYSQL (4 months), Javascript (Udemy), HTML (6 months), CSS (6 months)

Academic Projects

- **BUSES R US: Java, developed a fully functional bus-tracking Android phone application**
 - Solo project done in Java with full ownership from task planning, to interface set-up, pulling live API, testing, debugging and ensuring delivery within tight deadlines.
 - Utilized organizational skills to break down project into clear tasks, accurately prioritize tasks and allow easier monitoring of project's overall progress
- **Project Get.Da.Money: Database built to store historical prices of crypto currencies**
 - Worked collaboratively in a team of 4, successfully built a database with a working interface for account registration from initial conceptualization to go-live.
 - Involved in project planning, forming relational diagrams, user stories.
 - Involved in backend activities, data-related aspects such as data relation, data population, testing, data validation and ensuring accuracy throughout data using basic SQL command.
- **UBC Insight: TypeScript + JavaScript, Built a query engine to answer queries about UBC course sections**
 - Worked in a team of 2, responsible for building the dataset handling portion of the query engine.
 - Finished WebServer, FrontEnd, API Set-up alone.
 - Involved in the testing phase throughout the project.

BO HAN (JACKY), ZHENG
